

RAG Pipeline Test Document

1. Introduction

This is a test document for the RAG document processing pipeline. It contains multiple sections to test structure-aware chunking.

2. Methodology

The pipeline uses PP-DocLayoutV3 for layout analysis, PaddleOCR for text extraction, and bge-large-zh for embeddings.

3. Results

Test results show the pipeline can handle complex document layouts with high accuracy.

4. Conclusion

The RAG pipeline successfully processes documents and enables effective retrieval-augmented generation.
